Traffic Signal Light

A solar traffic light is a signal indication that converts solar energy into electrical energy. It consists of solar cells, controllers, traffic signal machines, maintenance-free storage battery, signal light and other main components. Compared with ordinary signal lights, solar traffic lights are more environmentally friendly and power saving, because with power storage function, there is no need to lay signal cables during installation, which can be effective. It is becoming more and more widespread to avoid the occurrence of power outages caused by construction of applications.
